Angular Clearance	α	لقی زاویه ای
Cutting land	S	صفای ماتریس

 اندازه سنبه

$$d=D-2C$$

Die Size
 اندازه ماتریس

Notes:

Cutting lands should be considered equal to stock thickness but 3mm at least. In many cases the cutting land is ignored and the angular clearance starts from the edge of cutting edge which α is between $1/8^\circ$ to $1/2^\circ$ depending on the production value and other circumstances.

If using cutting lands, angular clearance α should be considered up to 2° to the maximum but better to consider the smaller one.

نکات:
صفای ماتریس (S) برابر با ضخامت ورق ولی حداقل ۳ میلیمتر در نظر گرفته می شود. در بسیاری از موارد از صافی ماتریس صرف نظر شده و لقی زاویه ای از لبه برش شروع می شود که در این صورت مقدار α بین $1/8^\circ$ تا $1/2^\circ$ بسته به حجم تولید و سایر شرایط تعیین می شود. در صورت استفاده از صافی ماتریس α حداکثرتا 2° درنظر گرفته می شود ولی همواره بهتر است مقادیر کمتر لحاظ گردد.

Material	C	جنس ورق
Low Carbon Steel	0.03T	فولاد کم کربن (نرم)

- The above amounts are general. Noticeable decrease or increase in clearance is possible with awareness of the effects.

- مقادیر فوق عمومی است. کاهش یا افزایش قابل توجه لقی با درک صحیح از تأثیرات آن امکان پذیر است.

Information
DIN 9844

Notice:

توجه:

Head type punches with round point (DIN 9844) are intended for floating assembly in the punch retainer. Radial guiding is to be provided by the stripper. This type of punch assembly eliminates alignment errors caused by distorted mounting of the die set and faulty press geometry. With punches held in this manner, a clear separation between transmission of perforation force and guiding is achieved. In order to facilitate assembly of punches of different diameters, the height of the heads is standardized to $4^{+0.2}$ mm (DIN9844).

سنبله های DIN 9844 با انطباق آزاد در صفحه سنبله قرار می گیرند و راهنمایی سنبه توسط ورق گیر انجام می گردد. در این نوع مونتاژ، خطاهای ایجاد شده از مونتاژ ناصحیح کفشدک و خطاهای پرس (لقی پرس) برطرف گردیده و تفکیک واضحی از دو نیروی برش و سیستم راهنمای وجود دارد. جهت تسهیل در کار، قطرهای مختلف این نوع سنبله با سر استاندارد شده به ارتفاع $4^{+0.2}$ میلیمتر مطابق DIN 9844 آماده تحویل می باشد.
